                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                           Score

Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (1). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. AAH20173 represent specifically claimed primers which can be used in diagnostic methods from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or

(I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome
                                                                                                                                                                                                                       N.B. The present sequence is derived from the human stated on page 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (1). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (UYMC-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein or spastin gene expression or activity. The encodes a mutated human spastin.

N.B. The present sequence is not given in the present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to

                                                                                                                                                                                                acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence

The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spastin
                                                                                                                                                 Sequence 12793 BP; 4163 A; 2256 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay

                                                                    markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence represents a mutated human spastin gene from the present sequence is not given in the present specification but the present sequence is not given in the present specification but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular verbit to rethromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neurodegenerative disease; reduced sensory nerve conduction; diagnosis; reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (ARSACS)) gene sequences (I). The spastin gene has been mapped chromosome 13q11. (I) have neuroprotective activities and can be gene therapy and as a spastin polypeptide agonists. (I), their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page -; 76pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Charlevoix-Saguenay disease by detecting two point mutations in spastin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                   The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastic activities and can be used in chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of purkinje cells and abnormal neuronal linial storage (I) can also be used to procduce
or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence encodes a mutated human spastin.

N.B. The present sequence is not given in the present specification by the content of the present sequence is not given in the present specification by the content of the present sequence is not given in the present specification by the content of the present sequence is not given in the present specification by the content of the present sequence is not given in the present specification by the content of the present sequence is not given in the present sequence.
                                                                                                                             abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6473

                                                           The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments
                                                                                                                                                                                   New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spast
                      or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual.

The neurodegenerative

nerve velocity,

disease comprises reduced sensory nerve conduction elocity, hypermyelination of retinal nerve fibres,

atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome

Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence encodes a mutated human spastin.

N.B. The present sequence is not given in the present specification but is derived from the human spastin nucleotide sequence (AAH20174) as stated on page 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnosis; reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell; abnormal neuronal lipid storage; genetic disorder; characterisation; ds
                  New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix Saguenay disease by detecting two point mutations in spast
                                                                                                                                                                                                                                                                                                                                                                                        20-OCT-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-AUG-2001

The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in GC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or adding in the CC diagnosis of an early onset neurodegenerative disease in an individual. (CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce markers, to identify genetic disorders, as hybridisation probes or CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with spastin CC enrodes mouse enastin as alven in the present invention.

DNA encoding novel human diagnostic protein #19799
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA0825-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides antibodies against the polypeptides, methods of detecting the nucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        haematopoiesis regulatory activity; tissue growth activity; immunomodulatory activity; activin- or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             13-FEB-2002
                                                                                                                                          AAS83995 standard; cDNA; 1986 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 screening techniques. The present sequence represents novel human polypeptide of the invention.

                                                                                                                             RESULT
                                                                                                                                                                                                                                                                                                                                     polynocheoticles are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating in the polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. AAS64197-AAS94564 represent novel human colding sequences data for this patent did not appear in the printed septence in the printed of the invention, but was obtained in electronic format directly from WIPO as the print of the invention, but was obtained in electronic format directly from WIPO.

                                                                                                                                                                                                                                                                    CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerased are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed content in the printed content in the companions.

                                                                                                                                                          RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CP polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II), (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polypucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess blodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at fig. wipo.int/pub/published_pct_sequences.

and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                    AAS88179 standard; cDNA; 2206 BP
                                                                                                                                                                                                                                                                                             2045 GTGAATGGCCACTCTGCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31-MAR-2000; 2000US-0540217

                                                                                                                                                                                                                                                                                                                                                                                              CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polyperase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags of ridentifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques (II), (II) is useful for generating antibodies against it, detecting or cquantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed cat for the number of the forence of the inventions.

                                                                                                                                                         The invention relates to isolated polynucleotide (I) and CC polyneptide (II) sequences. (I) is useful as hybridisation probes, CC polynerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics forensics, gene mapping, identification of mutations in CC diagnostics forensics, gene mapping, identification of mutations in CC and to produce other types of data and products dependent on DNA and CC anino acid sequences. AAS64197-AAS94564 represent novel human CC specification, but was obtained in electronic format directly from WIPO CC at ftp. wipo.int/pub/published_pct_sequences.

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                           DB

National Cancer Institute, Cancer Genome Anatomy Project (CGAP), Tumor Gene Index Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 238) Homo sapiens EST /note-\*Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site\_1: Not I; Site\_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI\_CGAP\_GCBl) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made /clone="IMAGE:1466342" /clone\_lib="Soares\_NFL\_T\_GBC\_S1" /lab\_host="DH10B" /organism="Homo sapiens" /db\_xref="taxon:9606" 1. .238 from the same 3 libraries. The pools consisted of Location/Qualifiers Homo sapiens cDNA clone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25x genome coverage. High density colony filters are available upon request."

It is a filamentous ascomycete with a haploid genome (n-7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal pathogen for studying order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25x genome coverage. High density colony filters are available upon request."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Natl. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements The following repetitive elements were found in this cDNA sequence: 1-23, >AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BE652591 477 bp mRNA UI-M-AOO-ach-d-01-0-UI.rl NIH_BMAP_MPG Mus UI-M-AOO-ach-d-01-0-UI 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               National Institute of Mental Health 6001 Executive Blvd. Room 7N-7190, MSC 9643, Bethesda,
